#### Guide features

- > Advanced compact design and sturdy construction.
- > Easier and faster guide setup in the workshop.
- > Rapid intervention for eventual cobble removal in the mill thanks to modular "double split-type".
- > Simpler replacement of rollers and bearings thanks to "split-type" guide design.

- > 2 and 3 strands slitting is also possible.
- > Improved rolling conditions and longer life of rolling rolls thanks to the "dedicated" groove extra-cooling capability.
- > Roller regulation for accurate and fine control of slit bar deviation.
- > Independent regulation system for each of the two pairs of slitting rollers for absolute precision in rolled stock separation and equally balanced strands.

The latest generation MSL Multistrand Slitting roller guides are specially designed for 4 and 5-strand slit rolling of superior quality deformed bars.
